ABSTRACT:

PURPOSE: To hold value added such as aroma or deodorizing function without altering appearance by forming a character or pattern part using an ink having aroma.

CONSTITUTION: Paper is used as the base material 1 of a calender and a character part and a pattern part are formed on the printing part 2 on the surface thereof using an aromatic ink and a film 3 having gas barrier properties is laminated thereon. Coated paper is used as the paper of the base material 1 and a pattern of a dragon or the like is formed as a pattern. At this time, as the aromatic ink forming the pattern part 32, a compsn. prepared by adsorbing aroma such as mint by diatomaceous earth and kneading the same with printing ink is used to perform printing by a screen printing method. After an adhesive is applied to the surface of the base

material 1, a transparent film is laminated to the surface of the base material 1 to form one calendar. The transparent film is peeled at the time of use. In order to prevent the leakage of aroma from the rear surface of the base material, it is pref. to also laminate a gas barrier film to the rear surface of the base material.
